

Maha Javed

I'm a Software Engineer at Radium, building production websites and web applications — from accessible, Storybook-driven frontends to the APIs and databases behind them. I currently help shape the design system Canon's teams build on every day, with a strong foundation in React, [Node.js](#), and modern web development practices. I'm driven by clean, user-focused engineering and a continuous drive to learn.

EXPERIENCE

Software Engineer — Radium

Aug 2023 – Present

- Building and maintaining a design system for Canon that's shared across multiple departments.
- Prototyping components in Storybook before they ship, and working on accessibility (WCAG, keyboard navigation, screen readers).
- Building APIs and integrating them into React + Tailwind CSS projects across the frontend, backend, and database layers.

NED University Library Website Updation

March 2022

- Transferred NED University Library to utilize cost-free Google Books and Open Library APIs.
- Employed JavaScript Ajax to enable instantaneous retrieval of resources.
- Enhanced the organization of the file system, resulting in improved access to resources.
- Offered training and support to ensure a smooth transition.

Php Developer Intern—Boossto Software

April 2022 - June 2022

- Actively participated as an intern in the collaborative development of an E-commerce platform based on the Laravel framework.
- Played a pivotal role in crafting and sustaining dynamic web pages, enriching the overall user experience and boosting functionality.
- Engaged in the enhancement of database queries for optimized performance, thereby contributing to the website's overall efficiency.
- Maintained a close collaboration with the development team to detect and resolve software glitches and issues, ensuring the website's robustness.

EDUCATION

NED University of Engineering and Technology— (2019 - 2023)

BE in Software Engineering(CGPA-3.886)

Bahria College Karsaz — *Pre-Engineering* (2017- 2019)

PROJECTS

Cloud3 - A secure and Decentralized Storage (Web App)

Fydp project

Created Cloud3, an advanced web application for secure and decentralized storage using React and Node.js, with Sequelize for MySQL database administration. This pioneering system guarantees data security and confidentiality by encrypting and housing user data on IPFS (InterPlanetary File System) while logging essential metadata on the blockchain. This project highlights my expertise in full-stack development, blockchain incorporation, and my dedication to delivering solutions that prioritize privacy and security.

Code Hub: A comprehensive learning and collaboration platform

Sep 2021 – Nov 2021

Designed an extensive full-stack website employing PHP, HTML, CSS, jQuery, and MySQL, delivering a versatile web application that includes programming tutorials, live chat capabilities, a note-keeping system, and an online library. This project highlights my competence in full-stack web development and demonstrates my capacity to provide a wide array of features and functionalities within a unified platform.

ShopEase

Sep 2022 – Oct 2022

Developed the user interface for an E-commerce website using React and Material UI, merging a strong design sensibility with state-of-the-art technology. This endeavor encompassed the creation and execution of user-friendly and aesthetically pleasing web pages, guaranteeing a fluid and captivating online shopping journey. This opportunity allowed me to refine my expertise in front-end development, user interface design, and responsive web design, thereby making substantial contributions to the E-commerce platform's overall effectiveness and visual allure.

NoteWise: Your Comprehensive Note Management Solution

Dec 2022 – Jan 2023

I conceived and built a complete full-stack platform for note management, leveraging the MERN stack, encompassing React, Bootstrap, Node.js, and MongoDB. This project illustrates my adeptness in both frontend and backend technologies, empowering users to efficiently generate, oversee, and structure their notes. Utilizing React to craft a dynamic and adaptable user interface, Bootstrap to achieve a sleek and responsive design, Node.js for robust server-side capabilities, and MongoDB for efficient data storage, this undertaking underscores my capacity to construct inclusive and user-centric web applications.
